| | **Urgent** | **Not Urgent** |
|---|---|---|
| **Important** | **Do - (Your MVP)**<br>● Compare players' recent performances to season averages.<br>● Rank players based on scoring and identify top prospects.<br>● Connect to a free NBA stats api and curl to retrieve the data. | **Schedule - (For V2.0+)**<br>● Add nba schedules to account for easier matchups.<br>● Have filters for specific categories like rebounds, assists, and points.<br>● Allow users to pick which category they prioritize the most (rank each and find best players for those cases). |
| **Not Important** | **Delegate - (Use a library)**<br>● Curl for getting api requests.<br>● Sort and awk to sort players calculate performance changes.<br>● Use a free NBA api database for player stats.<br>● Use jq for parsing JSON responses from api. | **Delete - (Cut it)**<br>● Building a graphical website<br>● Send notifications for good pickups from the waiver wire.<br>● Integrate with fantasy apps (Sleeper, ESPN, etc.). |
